

EDUARDO FARIA

+351 918 718 340 | business@eduardofaria.com | eduardofaria.com | linkedin.com/in/fariaeduardo | github.com/2101dudu

TECHNICAL SKILLS

Languages: Go, Java, Python, C, C++, JavaScript, TypeScript, SQL
Skills: Artificial Intelligence, Generative AI, LLM, Prompt Engineering, AI-assisted development, Agile, Scrum
Frameworks & Technologies: Node.js, Spring, React, API/REST, gRPC, PostgreSQL, MySQL, MongoDB, Redis, JUnit
Tools & Platforms: Docker, AWS, Git, Linux, CI/CD, Nginx, Kubernetes

EXPERIENCE

Uphold Braga, Portugal
Backend Engineer May 2026 – Present

- Automated XDC staking, replacing a daily manual process affecting ~\$40M in customer-held assets and enabling ~5% projected staking yield.
- Automated CSPR staking, replacing daily manual operations and covering \$3M+ in unstaked customer assets.
- Engineered margin-position reporting in a **Go** liquidity-balancing service across 4 exchanges, correcting balances to true net exposure for reserve management and **MiCA** regulatory reporting.
- Eliminated balance-corruption bugs across 2 exchanges by propagating swallowed API errors and implementing mutex-guarded monotonic Kraken nonces, preventing understated balances from triggering incorrect trades.
- Built a **Node.js** metrics integration for TRX staking balances, adding Datadog monitoring and visibility into a previously untracked asset class.

Uphold Braga, Portugal
Backend Engineer (Internship) Jul 2025 – May 2026

- Engineered a shared **Spring Boot** driver for Temenos T24 JCA connection management across 4 microservices, and optimized connection pooling to eliminate 3,900+ lines of legacy code.
- Migrated 36 **Java** source files to a handler-based architecture (reducing ~1,200 net lines) and standardized PII masking and request-ID tracing for GDPR compliance.
- Established a configuration-driven mock server framework using YAML routes and JSON stubs, significantly increasing internal testing velocity.

Eurotux S.A. Braga, Portugal
Cybersecurity Analyst (Internship) Jul 2024 – Sep 2024

- Collaborated with the **SOC** team in using OpenCTI to handle an average of 28 security alerts per day, including a peak of 171 incidents.
- Conducted penetration testing using Kali Linux on Metasploitable 2, exploiting 15 critical vulnerabilities to enhance system security awareness.
- Authored 110+ **SOPs** for 13 sub-teams, updating 31% of the corporate documentation library.

CoderDojo Braga Braga, Portugal
Programming Teacher Feb 2023 – Jun 2025

- Mentored 20+ programming sessions for ages 7–17, achieving a near-100% student retention rate.
- Guided trainees through **Python** challenges that improved participants’ basic engineering skills.

PROJECTS

Proof-of-Work Blockchain | *Go, BadgerDB*

- Designed and implemented a blockchain in **Go**, featuring SHA-256 hashing, proof-of-work consensus, and UTXO handling, with BadgerDB-backed persistent storage.
- Implemented a secure wallet system with ECDSA digital signatures and Base58 address encoding, featuring a distributed network layer with block propagation, chain validation, and automatic database recovery.

Full-stack Travel Agency App | *Go, NEXT.js, Redis, MongoDB, Docker, NPM*

- Architected a high-concurrency **Go** backend utilizing **Redis** caching and **MongoDB** to aggregate and normalize travel data from multiple legacy SOAP API providers.
- Developed a self-hosted **NEXT.js** frontend that serves an average of 102 monthly active users.

EDUCATION

University of Minho Braga, Portugal
Bachelor of Science, Computer Science and Engineering | *Grade: 16/20* Sep 2022 – Jun 2025
